Tv / remote

The remote labeled "TV & Cable" is used for controlling the tv (on/off, volume, source select, ...) and the cable box. You must select, using the oval buttons at the top of the remote, which device you are selecting. ==Specifically, you must select tv to turn tv on/off and control volume, and select cbl for cable box on/off & channel select==. (Yes, I know this is stupid, but there it is)

In addition to cable TV, there is a roku box available. Use it to watch amazon prime, Netflix, and numerous other streaming channels.

Use the "video source" button (bottom left) to select whether you want to watch cable tv (HDMI 1) or roku (HDMI 2). Use the separate roku remote to control the roku box.
